

Brian Tripp

Overland Park, KS • dev@bdtripp.com • bdtripp.com • github.com/bdtripp • linkedin.com/in/bdtripp

Summary

Software Engineer who excels at following industry standards, adapting to new technologies, considering problems from the end-user's perspective, and maintaining strong attention to detail. Consistently delivers timely professional-quality projects. Excellent understanding of web application architecture and object-oriented programming. Proficient in writing well-structured, maintainable code utilizing front-end, back-end, and mobile technologies such as JavaScript, Java, PHP, and SQL. Experienced with Docker for containerizing applications and deploying them through CI/CD pipelines using GitHub Actions.

Technical Skills

Front-end: HTML5, CSS3, LESS, JavaScript, React

Back-end / Databases: PHP, Java, MySQL

CMS: WordPress, Craft

Scripting / Markup: Bash, PowerShell, YAML, XML

Tools / Platforms: Nginx, Apache HTTP Server, phpMyAdmin, GIMP

DevOps / Workflow: Git, Docker, CI/CD (GitHub Actions), Linux VPS administration (Ubuntu)

Infrastructure / Networking: Reverse proxy configuration (nginx-proxy), Cloudflare DNS & edge proxying

JavaScript Tooling: npm, pnpm, Vite

Development Environment: VS Code, Android Studio

Professional Experience

Association For Computing Machinery | New York, NY (Remote)

Web Developer (Part-time, Contract) January 2019 - June 2019; June 2020 - September 2020

- Maintained and enhanced a production web application built on Laravel/Homestead and Craft CMS.
- Implemented UI and admin-side updates using Twig/HTML templates, CSS3, JavaScript, PHP, and SQL.
- Completed the majority of assigned tasks for each contract period, determining solutions with minimal guidance.

Wonderland Running - Volunteer Work | Portland, OR

Web Developer, (part-time) April 2019 to June 2019

- Collaborated with the client to design a website to showcase multiple running events, providing event registration, course details, and fee information.

Projects

- **Open Source Contributions, freeCodeCamp | November 2025 - Present**
 - Clarified and corrected mistakes in course material, moved the position of a lab within a course, and modified the options for a multiple choice question.
 - Incorporated suggestions in PR reviews and opened several new issues.
 - Contributed improvements to curriculums used by millions of developers worldwide.
- **Portland Art Supply**
 - Designed a nine-table relational database for category, product, and user account data.
 - Implemented dynamic drop-down lists for product color and size options using multi-JOIN queries.
 - Used AJAX to provide real-time updates to shopping cart quantities and totals.
 - Stored PHP sessions in the database so the shopping cart is restored when the user logs in.
- **Haunted House**
 - Developed a text-based adventure game using OOP with clear API, service, and game engine layers.
 - Refactored so the same Java backend that powers the CLI could be used for a new web interface.
 - Created a web-terminal UI from scratch that uses a Spring Boot REST API to expose JSON endpoints for the game engine.
- **World War II Soldier Surveys**
 - Used JavaScript promises to fetch and parse National Archive data imported from multiple CSV files.
 - Updated from React Class Components to modern Functional Components.
 - Used React Router to create a view for the survey topics and a view for the responses all within an SPA.
 - Created a response layout using CSS grid to display survey topics.

Certifications

- freeCodeCamp | Responsive Web Design Developer Certification (300 hrs) | January 2026

Education

Portland Community College – Portland, OR

Associate of Applied Science Degree, Web Development and Design, graduated 2019, Highest Honors (GPA: 4.0)
